

JOB MANAGEMENT

Simplifying complex jobsite requirements

Job Management is a robust alternative to core RentalMan operations that gives you the freedom to organize and process rental contracts any way the job requires. Job Management can track an individual rental, or an entire jobsite at any level of complexity. Ideal for scaffolding, it was designed to track and bill labor, production and consumption costs across the jobsite, at every stage of the project. If your business provides onsite labor or other services that the standard rental-out process doesn't handle or track as well as you like, check out Job Management.

- ✓ Capture labor and production costs
- ✓ Report across multiple contracts
- ✓ Move equipment on and off rent without having to close the contract or create a bill
- ✓ Configure cost-tracking to be as specific or general as desired
- ✓ Forecast job costs and revenue
- ✓ Facilitate approval process around contracts
